| i   |     |     |     |     | j   |

Since 456 is in the correct position, therefore consider a new sub array [123, 200, 308, 196, 345]

Pass 41

i=0, j=1

Consider 345 as the pivot

|     |     |     |     |     |
|-----|-----|-----|-----|-----|
| 0   | 1   | 2   | 3   | 4   |
| 123 | 200 | 308 | 196 | 345 |
| i   |     |     |     | j   |

Pass 42

i=0, j=2

Pivot=345

|     |     |     |     |     |
|-----|-----|-----|-----|-----|
| 0   | 1   | 2   | 3   | 4   |
| 123 | 200 | 308 | 196 | 345 |
| i   |     |     |     | j   |

Pass 43

i=0, j=3

Pivot=345

|     |     |     |     |     |
|-----|-----|-----|-----|-----|
| 0   | 1   | 2   | 3   | 4   |
| 123 | 200 | 308 | 196 | 345 |
| i   |     |     |     | j   |

Since 345 is in the correct position, partition the array and repeat the process

|     |     |     |     |     |
|-----|-----|-----|-----|-----|
| 0   | 1   | 2   | 3   | 4   |
| 123 | 200 | 308 | 196 | 345 |
| i   |     |     |     | j   |

Pass 44

i=0, j=1

Pivot=196

| 0   | 1   | 2   | 3   |
|-----|-----|-----|-----|
| 123 | 200 | 308 | 196 |
| i   | j   |     |     |

| Since j > pivot, swap the elements |     |     |     |
|------------------------------------|-----|-----|-----|
| 0                                  | 1   | 2   | 3   |
| 123                                | 200 | 308 | 196 |
| i                                  | j   |     |     |

| Now, 196 is in the correct position. |     |     |     |
|--------------------------------------|-----|-----|-----|
| 0                                    | 1   | 2   | 3   |
| 123                                  | 196 | 308 | 200 |
| i                                    | j   |     |     |

| Since 123 is a single element, we consider the second half of the array [308, 200] |     |
|--|-----|
| Pass 45  |     |
| 0  | 1   |
| 308  | 200 |

| Considering 200 as the pivot, it is smaller than 308, hence we swap it |     |
|--|-----|
| 0  | 1   |
| 308  | 200 |

| After Swapping |     |
|----------------|-----|
| 0              | 1   |
| 200            | 308 |

|   |  |
|---|--|
| Final Result  |  |
| After all the passes, the array is sorted in ascending order: |  |

| 0 | 1 | 2 | 3 | 4 | 5  | 6  | 7  | 8   | 9   | 10  | 11  | 12  | 13  |
|---|---|---|---|---|----|----|----|-----|-----|-----|-----|-----|-----|
| 3 | 5 | 6 | 7 | 9 | 23 | 78 | 89 | 123 | 196 | 200 | 308 | 345 | 456 |

## 5. Merge Sort

3, 5, 78, 89, 456, 123, 23, 9, 7, 200, 308, 196, 345, 6.
